# KPMG in Romania's Environmental Policy

KPMG in Romania is committed to integrating environmental best practice into its business activities. This requires coordinated actions to minimize our consumption of natural resources and our generation of waste.

To achieve environmental improvements we will:

- identify and measure the manner in which our business practice affects the environment
- adopt best practice and play a leading role in developing innovative solutions to environmental issues facing our sector
- conduct our activities with full knowledge of and compliance with environmental regulations
- integrate environmental considerations and objectives into all our business decisions
- minimize consumption of natural resources and wastage of materials as far as economically practicable
- establish environmental objectives and targets and measure performance against them

- encourage awareness and commitment to improve environmental performance amongst our people, our suppliers and our clients
- develop our training programs and work practices to better support our environmental goals and reduce our overall negative environmental impact; and,
- ensure our environmental improvement programs become an integral part of our business processes.

We will promote environmental awareness among our people, our suppliers and our clients through:

- having readily available information on environmental issues, our goals and our performance improvement
- actively soliciting feedback and suggestions for performance improvement
- supporting environmentally friendly behaviour and practices among our staff and our communities; and,
- communicating our challenges and our progress in a brief annual environmental improvement report.
